

AI Workforce Operating System

Managing the AI Workforce the Way Companies Manage People

Project Presentation

An HR system — but the employees are AI agents

As companies use AI agents alongside human employees, each agent needs what a human hire already gets: an identity, a defined role, monitored activity, and a clear owner. AI-WOS gives every AI agent that lifecycle — across whichever platform it runs on.

Identify

Control Access

Monitor

Offboard

The future problem: companies will soon run hundreds of AI agents with no system to answer “who owns this, what can it touch, and can we turn it off?”

THE PROBLEM

Six problems companies face managing an AI workforce

Agent Management

Agents are created and destroyed dynamically — most companies don't know how many exist.

Security

88% of orgs report AI agent security incidents; only 22% treat agents as identities.

Identity & Access

78% of organizations have no policy for creating or removing AI agent access.

Monitoring

Agents act at machine speed — problems surface only after the damage is done.

Accountability

Most companies can't say which agent acted, or who was supervising it.

Governance

Standards are only emerging — NIST's AI Agent Standards Initiative began Feb 2026.

A fast-growing gap, right now

40.8%

CAGR of AI agent identity & access management — the fastest-growing slice

40%

of enterprise apps will embed task-specific agents by end of 2026 (Gartner)

DPDP + DPIIT

India's data law and government seed-funding schemes make this a strong first market

Multiple analyst firms, figures rounded — definitions vary.

Everyone's building an HR department — just for their own agents

Every big tech company is building the HR department for their own AI agents. We're building the one HR department that works across all of them.

No platform owner is incentivized to build the neutral, cross-platform version — that gap is what this idea fills.

The six core features of the platform

Agent Discovery

Builds a live list of every AI agent — including forgotten ones.

Identity Management

Gives every agent a profile: name, purpose, owner, platform.

Access Control

Shows what each agent can touch; flags excessive permissions.

Activity Monitoring

A live feed of what every agent is doing, in real time.

Performance Tracking

Task success rate, correction frequency, cost per task.

Lifecycle Management

Onboards, pauses, and retires agents — one click to disable.

How this becomes a real business

WHO PAYS

- Mid-size companies (200–3,000 employees) running 5–50 agents with no way to track them
- First movers: Indian IT services & SaaS firms piloting agents for global clients

HOW WE EARN

- SaaS, priced per AI agent managed per month
- Free tier for small teams; paid tier adds audit reports & deep access control

FUNDING JOURNEY (₹)

Prototype

self-funded + college incubation

₹0 – 10 lakh

Pre-seed

DPIIT Seed Fund, TIDE 2.0

₹10 – 50 lakh

Seed

after 2–3 real pilot customers

₹1 – 4 crore

In five years, the question won't be
“should we use AI agents”—it'll be
“do we know what ours are doing.”

AI WORKFORCE OPERATING SYSTEM

The HR system built for AI agents.
